of a transient nature when it arises from the former and is commonly removed by depleting medicines. When it follows hepatitis it arises from the neglect of depletion. But it sometimes occurs in the West Indies from the febrile, but protracted operation of heat, and miasmata without being preceded either by yellow fever or inflammation of the liver. The blood vessels are unable in this case to emit the tones of inflamm<sup>n</sup> but descend directly ~~below disease~~ <sup>paving</sup> down to disorder without <sup>paving</sup> through the stage of disease.

2 It is sometimes brought on by Scrofula.

3 It is a frequent consequence of the

✓ But This pallid countenance does  
not take place in this disease from  
Other Causes. On the Contrary - the face  
generally assumes not a yellow, but  
a Sallow or Olive color. f

Habitual use of Ardent Spirits. Drunkards  
After exhibiting red or yellow faces for  
a number of years, often become pale.

This is the effect of the total stoppage of the  
secretion and excretion of bile. It is gene-  
rally a forerunner of death. It marks the

the worst grade of intemperance, <sup>as</sup> ~~and~~ white

does the highest grade of heat. <sup>The liver</sup> ~~It is~~ <sup>the</sup> ~~liver~~

looks and feel like dry flesh. It is in the

same torpid state that we shall say hereafter

the brain is in fatuity. <sup>This disorder has</sup> ~~It occupies a greater~~

~~on the surface of the liver, but sometimes~~  
~~been called~~  
~~the whole liver it is called~~

1. Hepatalgia. It is <sup>generally</sup> attended with some  
pain, and when enlarged, with a difficulty  
in lying upon the left side. It sometimes  
continues for many years <sup>without any pain,</sup> but more  
commonly it brings on a fatal ascites,

for the lymphatics being numerous  
 in ~~this~~ the liver, the streams of lymph  
 which usually <sup>flow</sup> thro' it are naturally  
 diverted into the Abdomen. Where it  
 does not produce ascites, it brings on  
 atrophy, and marasmus that is, a  
 waste of the body without fever. It  
 sometimes ends in a fatal hemorrhage  
 known by the name of Melena.

The Remedies for this disorder are  
 1 A large Caustic applied to the external  
 regions of the liver. ~~It~~ I have once seen  
 the liver resuscitated by this remedy &  
 an incipient Dropsy of the belly thereby  
 cured.

2 The Cold Bath. The late Dr Denonmairie  
 of Bristol <sup>in this state</sup> opened me he ~~to~~ seen it cured  
 by the use of this remedy.

3 Frictions & Stimulating Applications

to the region of the liver,  
 4 Calomel in small doses continued for  
 months & years. I think I have done  
 good by this medicine used in this way  
 in Dyspepsia.

5 Chalybeates and bitters and aromatics.  
 They act Sympathetically upon the  
 liver and they impart a vigor to the  
 whole system which is felt by the liver.

6 Long journeys persisted in once a  
 year for ~~two~~ three or four years, have  
 sometimes cured this disease.

7 ~~I think~~ I have once known it  
 removed by a change of climate.

I shall dismiss this disorder of  
 the liver by remarking that it fre-  
 -quently exists in a portion of the

4

6

I

1

4

C

—

4

1

liver only, and in these cases is often combined with some one of the diseases of the liver which have been described.

II

### Jaundice.

The <sup>symptoms</sup> ~~signs~~ of this disorder are <sup>yellowness</sup> ~~marked~~ ~~and character~~ over the external surfaces of the body, but most <sup>obviously</sup> in the eyes - languor, depression of spirits, costiveness - now and then diarrhoea - white stools, - itching of the skin - a slow fever but more commonly a natural pulse, with a natural temperature of the skin. Costiveness is said to occur most frequently in young people. It is said to be less common in old people, & very rare in drunkards.

in

=

f

f

L

2

.

Its Causes are transient & Chronic.

The former are 1 a spasm upon the common duct, 2 bilious & intermitting fevers. - <sup>It is said</sup> ~~hence we~~ sometimes <sup>to prevail</sup> observe it to ~~appear~~ as an epidemic. When it does, it is as a symptom only of those autumnal diseases. 3 Fear 4 anger 5 prepulse from contigorous parts particularly from the <sup>pancreas, the</sup> ~~from the~~ colon when distended with feces, and the uterus in pregnancy.

The Chronic Causes are 1 viscid bile, and Gall stones obstructing the cystic or common duct. 2 a tumor or scirrhus in either of those ducts, or in the pancreas.

3 Dr Grouse mentions a Case of jaundice from the common duct becoming impervious from disease.

4

4 matters in the duodenum particularly  
 coagulated milk obstructing the passage of  
 bile into it. Take notice gentlemen, the  
 obstruction in the two last <sup>cases</sup> ~~cases~~ that  
 have been mentioned is only in the com-  
-mon duct. Dr. Monro informs us  
 that he once saw the cystic duct so  
 completely closed by two gall stones  
 that no air could pass thro' it, &  
 yet the patient died without jaundice.  
 Dr. Keith also saw a similar <sup>Absence</sup> ~~case~~ of  
 jaundice <sup>where</sup> ~~from~~ <sup>an obstruction of the</sup>  
 cystic duct was obstructed by a gall  
 stone as large as a nutmeg. When  
 a jaundice occurs with a complete  
 obstruction of this duct, it is sup-  
 -posed the obstructing matter com-  
 -municates imperceptibly from the

insensible cystic duct, to the exquisitely  
<sup>and irritable</sup> sensible termination of the common  
 duct in the duodenum which is thereby  
 contracted, and thus hepatic bile is  
 retained, and afterwards absorbed, or  
 conveyed by resorption into the blood.  
 There is in this ~~case~~ case an error  
 of sensus and motus.

5 Dr Stoll has given us an account of  
 three cases of fatal jaundice in which  
 no obstruction of any kind was disco-  
 -vered either in the cystic, or common  
 duct. The obstruction was probably  
 from a torus upon the  
 common duct which relaxed after  
 death.

~~When obstructions are seated in the  
 cystic duct only, the symptoms of~~

~~The body goes on as usual.~~

There have been many disputes whether bile can exist in the blood. Dr Roebuck a graduate in this University has clearly proved that it does, in this disorder, by a number of satisfactory experiments. There have likewise been disputes among pathologists whether the bile be conveyed into the blood in a jaundice by absorption or regurgitation. It is most probable it enters the blood in both ways. The black jaundice seems to be produced by the absorption of black bile. ~~from the~~ gall bladder. Dr Smith supposes the blackness of the Africans to be derived originally from this cause.

I have seen the color of the face of a greenish cast in several instances of jaundice. I have <sup>no</sup> doubt of its being derived from the absorption of green bile, ~~from the gall bladder~~.

Persons of all ages are subject to the jaundice. It occurs in new born infants. It attacks the two sexes nearly alike. Of 100 patients whom Dr. Mc-  
= Gordon attended in a given time in this disorder 52 were men & 48 were  
= women.

Objects are seldom coloured in the eye by this disorder, owing to the bile tinging the tunica ~~alba~~ conjunctiva only, and not the humors of the eye, nor is the color of the <sup>brain, nor of the</sup> tongue, nor the ~~taste of the~~ saliva - nor the quality of the milk generally affected by the bile

which circulates with the blood. milk and oysters have their natural taste, but there are certain aliments and drinks which impart a sensation of bitter to the tongue.

There is something ~~extraordinary~~ peculiar in the action of the bile upon different parts of the body. while several of the fluids, and some of the solid parts of the body receive ~~no~~ <sup>no</sup> color from it, <sup>the</sup> ~~liver~~ <sup>liver</sup> and <sup>liver</sup> ~~liver~~ are sometimes tinged by <sup>it</sup> of this Dr. Hall mentions an instance which came under his own observation.

The Remedies for Jaundice should be regulated by its symptoms & causes. If the pulse be full or tense, it will be proper to begin the cure by

To  
1 Bloodletting. The disorder in this  
state of the pulse is always accompa-  
-nied with more or less disease in the  
liver. I have occasionally bled in this  
state combination of disorder with dis-  
-ease with success once in 1803, and again  
in 1809 in the Penney's hospital, but  
I have as often ~~been~~ employed this  
remedy without effect. Authors gene-  
-rally consider <sup>fever with</sup> jaundice with fever  
as a most alarming symptom.  
It is to probably chiefly from the  
neglect of early and sufficient bleeding.

If the jaundice arise from a  
spasm upon the common duct, the  
remedies should be  
opiates, laxatives, the warm bath,  
and afterwards tonics.

*[Faint, illegible handwritten text, likely bleed-through from the reverse side of the page.]*

36

If it arise from the pressure of the Colon distended with feces, they should be removed by

3 Purges. If it arise from the pressure of the pregnant Uterus <sup>up-</sup>wards, it should be removed by de-  
-pressing the Uterus by means of a bandage. If it arise from viscid bile it should be removed,

5 by emetics - purges - mineral waters - Soap, exercise, <sup>Dandelion -</sup> and mercury.

~~I have said it arises from Gall stones. The remedies for them shall be mentioned under our next head.~~

The following empirical prescription has been found useful in the cure of Jaundice, & its efficacy is probably confined chiefly to those cases in

which obstructions from viscid  
bile have existed in the cystic and  
common ducts. Potash and Gum  
Arabic of each ℥ss Castile Soap ℥i  
Brandy ℔i. In a half to a whole  
wine glass full of this medicine is  
usually taken three times a day.

The Remedies for the removal of  
Gallstones, which I have said is one  
of the Causes of Jaundice shall be  
mentioned under <sup>another</sup> ~~another~~ head.

III. There is a disorder in the liver  
nearly allied to Jaundice, but not  
accompanied with yellowness of the  
Skin. It consists in a preternatural  
accumulation <sup>and stagnation</sup> of bile in the Gallbladder,  
~~and stagnation~~ from a torpor in its  
fibres. I have called the stools are  
generally white, except after taking a  
purgative

1

where they are of a dark color. I have called it Corticrops of the liver. Its remedies are active purges, mercury and exercise.

IV. Gall Stones come next in order under our notice. They are formed from the bile, and differ from each other in the following particulars.

1 In size, being ~~so large as~~ <sup>about as large as</sup> a small pea, up to a small egg:...

2 In figure being rough, angular, or highly polished from their friction upon each other.

Dr Parnick has in possession two or three stones of the latter kind taken from the gall bladder of Mr Muller the gentleman ~~with~~ case was mentioned in speaking of the secretion of water by the liver.

3 In number being from one to 100. That immense number of gall stones Dr

*[Faint, illegible handwritten text, likely bleed-through from the reverse side of the page.]*

*[Partial view of handwritten text on the adjacent page to the right.]*

Shalluck tells us were found in the Gall-  
 bladder of a person dissected by Dr Prescott  
 of Groton in Massachusetts.

4 In Wright - from five grains to 3½ dr  
 and three grains. A Gallstone of the latter  
 weight is mentioned by Dr Lettoun in the  
 first volume of the Memoirs of the Me-  
 dical Society of London.

5 In Consistence. They are of the Consistence  
 of tallow, and sometimes nearly as solid  
 as stone.

Handwritten text in cursive script, mostly illegible due to fading and blurring. The text appears to be organized into several paragraphs or sections, with some lines being more distinct than others. The ink is dark but the paper is aged and yellowed.

p. 10. 84

the nature of the matters

8

. 6 They differ in ~~their composition~~ which  
compose them. Boussy has mentioned 6  
species of them, ~~which depend on the degree of their~~  
for an account of which I refer you  
to ~~the~~ chemical books and to the Pro-  
-fessor of Chemistry. — one of the

species of them is inflammable. } This I  
discovered by an experiment made upon  
gall stone taken out of the liver of a woman  
who died in our hospital when I was a  
student of medicine. —

20 85

These Gall<sup>stones</sup> sometimes lie for years in  
the Gall bladder without giving any pain.  
a Stone that weighed 7ij was found in the  
Gall bladder <sup>one of</sup> of the Earls of Bath, & yet he  
never was diseased from it. Six gallstones  
were found in the Gall bladder of the  
unfortunate Mrs Robinson. Yet she died of  
indure in the liver or stomach. She died of  
a dysentery. a Gall Stone of 7i 2ij &  
9<sup>th</sup> was found in the liver of Lord Walpole,  
and yet ~~his~~ <sup>the</sup> apothecary who attended him  
for 40 years said he had never once com-  
plained of pain or disease from that cause.  
Similar ~~these~~ <sup>to those which have been</sup> cases are ~~probably rare~~ <sup>gall</sup>  
mentioned are <sup>to</sup> probably rare. They are  
often attended with great pain sometimes  
so exquisite as to cause fainting & ~~loud~~  
cries & shrieks. that are heard thro'

at 86 ~~we need not~~  
a whole neighborhood. ~~The seat of the~~  
~~pain is not a wonder at the intensity of~~  
~~this pain when we reflect upon~~ This  
pain is occasioned by the passage of a  
stone ~~from~~ <sup>from</sup> the gall bladder to the  
bowels, or by its stoppage in its progress  
to them. We need not wonder at the  
intensity of the pain when we reflect upon  
the size of the duct <sup>many</sup> thro' which the stone  
passes with the size of the gall stones w.  
pass thro' it. The seat of the pain is <sup>first</sup> in  
the pit of the stomach, from whence it  
spreads thro' the region of the liver, and  
upper bowels. It lasts ~~for~~ with some  
intervals & with some diminution in  
degree from three days to a month.  
Chills attend this pain, but neither fever  
nor ~~fatigue~~ increased frequency, or pulsation

V <sup>1</sup> Such as are proper in <sup>the</sup> forming  
state of the disease induced by them.

+ ~~To~~ <sup>I</sup> ~~that~~ <sup>12</sup> The symptoms of an  
approaching attack of this disease are light  
pain - Costiveness - Flatulency - and yellow  
- turbid water. In this state of <sup>the</sup> disease  
small & repeated doses of Laudanum - Ab-  
-stinance - <sup>a gentle purge</sup> ~~not~~ the pedicularium, & rest pre-  
-vent the formation of a periton.

87  
or tension of the pulse. A yellowness of  
the skin generally attends each parox-  
-ysm of the disease. In some persons  
a yellowness of the face is a constant  
symptom of the presence of Gallstones  
in the Gall bladder. — It is from the  
supposed absence of muscular fibres in  
the Cystic duct, and the small degree of  
sensibility possessed both by ~~the~~ it, and the  
Ductus Communis, the pain is said <sup>to</sup> ~~never~~  
depend upon the stone pressing <sup>upon</sup> and ~~press-~~  
distending the Duodenum at the place where  
it is connected with the Common duct.

The Remedies ~~for~~ for Gallstones  
divide them into three classes 1<sup>st</sup> 2<sup>d</sup> 3<sup>d</sup> such as  
are proper to relieve a paroxysm of  
the disease <sup>induced by them</sup> & 3<sup>rd</sup> such as <sup>as</sup> proper to  
remove <sup>them</sup> its cause. +

~~1<sup>st</sup>~~ The Remedies for a paroxysm of the

disease should be 1 vs. ~~when~~ I know the  
pulse does not indicate it, but <sup>when the</sup> ~~it~~ <sup>it</sup> ~~deposits~~  
pain is exquisite, it <sup>leaves</sup> it, and prepares  
the way for large doses of <sup>by</sup> Laudanum  
by the mouth and by way of Injections.  
3 The Warm Bath, 4 <sup>crossed</sup> to the  
extremities, and 5 a Blister to the Side,  
or pit of the stomach. After the pain  
is subdued, 6 opening medicines consisting  
of purges & hysters.

III. The Remedies proper to remove  
~~disturb~~ Gall Stones have been divided into  
chemical & mechanical. The former  
are said to alkaline salts - lime water,  
Soap - a mixture of Oil and Spirit  
of turpentine - the yolk of an egg &  
Oil mixed together - Lime Juice - &  
the Juice of the Dandelion - that is

V The late Dr Zimmernan thought highly of this simple medicine. It was one of his prescriptions for Frederick the 1<sup>st</sup> King of Prussia for a dropsy bred on by an obstructed liver. He prescribed the extract of this medicinal plant as well as its juice, and that to the amount he tells of an hundred pounds a year.

It is probable all the medicines that have been mentioned act differently according to the nature, or composition / parts of the gall stones. —

the Tarsaxicum of Linnaeus. There  
are respectable Vouchers for the efficacy  
of all the medicines I have mentioned.

In favor of the Dandelion, I can speak  
from my own experience. I was led to  
use it with the more confidence from having  
read in Cheselden's Anatomy that Ossen  
when killed in the Winter discovers biliary  
Concretions in the liver, but never after  
they have fed for two or three months  
upon the <sup>grapes</sup> ~~grapes~~. <sup>I have heard this</sup>

<sup>fact confirmed by a butcher in this city.</sup>  
what manner, <sup>all</sup> these medicines act I  
know not - It is certain <sup>some of them partially</sup> they dissolve

the Gall Stones out of the <sup>body</sup> but

it is difficult to conceive how they can

be conveyed in a state so concentrated, or

<sup>in such a quantity</sup> ~~was so diluted~~ as to act upon the Gall-

stones in the Gall bladder. <sup>Zinnemann's</sup> ~~practise~~ <sup>the</sup> ~~mode~~

✓ Dr Danvers & Dr Jacob Hall have published  
each a cure performed by this remedy. -

The remedies which act mechanically  
in removing Gall Stones are

- 1 ~~Heavy~~ Emetics frequently repeated
  - 2 Active purges. 3 copious <sup>Drinking</sup> ~~drinks~~ of warm water.
  - 3 Electricity.
  - 4 Exercise especially on horseback.
  - 5 a temperate Diet consisting chiefly of vegetables.
  - 6 The Alterative use of Calomel.
- With this remedy given in such doses as not to affect the mouth, I am sure I have done service.

If a Salivation should be resorted to, when the Calomel does not succeed in alterative doses. Dr Gibbons tells us in the Annals of medicine, that he ~~has~~ removed gall stones from 12 persons out of 13 by this remedy. —

Costiveness should be carefully prevented by lenient purges. 

*[Faint, illegible handwritten text, likely bleed-through from the reverse side of the page.]*

V. The <sup>next</sup> ~~last~~ disorder of the liver that I ~~shall~~ was mentioned is Serophula.

It may be known by occurring in scholastic habits. The remedies for it are the same as for that disorder in other parts of the body, all of which ~~shall~~ <sup>will</sup> be enumerated in their proper place. I have once seen the whole liver affected with it, ~~that it was~~ <sup>glandular</sup> ~~that it was~~ <sup>whose whole system was</sup> more or less affected with the same disorder.

VI. Schismus is sometimes the effect of previous inflammation, but it is often the product of impurities too feeble to manifest themselves in disease or pain. ~~It~~ <sup>considered as the</sup> ~~white~~ <sup>considered as the</sup> Hepatalgia may be ~~considered as the~~ <sup>considered as the</sup> ~~flux~~ <sup>flux</sup> of the liver, this may be considered as ~~its~~ death. It is rarely recapitulated.

your

will not be surprised at this when  
 you recollect how little medicine has  
 ever been able to accomplish in  
 Schisia even where we are able to ap-  
 ply our remedies in contact with them.  
 - The knife is generally the only cure  
 for them.

VII. Worms <sup>are</sup> sometimes <sup>found in</sup> ~~producing~~ <sup>are both</sup>  
 the liver in which they ~~produce~~ <sup>are both</sup>  
 cause & effect of disease, and disorder.  
 Dr Prost says he has often found worms  
 in the livers of persons who have died  
 of the hepatic state of fever. There is a  
 remarkable case of disorder & death  
 induced by a large worm in the liver  
 of a ~~man~~ <sup>man</sup> of this city related by  
 Dr Thomas Bond in one of the Volumes

93  
of the London Medical inquiries and  
Observations. In the month of Aug<sup>r</sup> 1811  
I lost a patient ~~is~~ with symptoms  
of Jaundice & Hepatitis. The morning  
after her death, a large number of  
small worms were seen creeping out  
of her mouth. They probably came  
from her liver where they probably  
were the cause, or effect of her disease.

It is ~~the liver contains~~ difficult to  
detect the presence of small worms in  
the liver. The presence of the large in-  
=gle worms found in the liver of Mrs.  
Holt was known by what she used to  
call a "quivering sensation". It is possible  
large doses of Calomel might dislodge  
them, but I can say nothing in its favor  
from my own experience. —

*[Faint, illegible handwritten text, likely bleed-through from the reverse side of the page.]*

*[Faint handwritten notes on the right margin of the adjacent page.]*

Disputations exhibit the following appearance:  
 - as after death from the diseases & disorders  
 of the liver.

After acute & Chronic inflammation, the  
 usual marks of inflam<sup>n</sup>. - Adhesion of the  
 liver to the diaphragm, and of the diaphragm  
 to the lungs - a large Abscess filled with  
 pus & sometimes with bile & blood - and  
 a communication between this Abscess  
 and the parts into which it usually  
 discharges itself which have been men-  
 tioned - great congestion of blood in the  
 liver - great enlargement of the liver  
 from blood or water - with & without Hyda-  
 -tids, a <sup>cirrhous</sup> state of the liver induced by Hypertrophia,  
 - Schirrhus partial & general, in the  
 latter case the liver enlarged in one in-  
 -stance <sup>to 30 lb</sup> as to weigh 27 pounds - a diminished  
 size of the liver - I have seen an instance  
 of this in our hospital. There was a

✓ called by Mr. Hunter interstitial Abs.  
= Desorption. — The liver in this case re.  
= resembles an ~~empty~~ honey comb.

95  
mark of a former Abscess upon it - an  
Absorption of the Substance of the liver &  
Tubercles - and Scrophulous tumors upon  
the liver - the Coats of the gall bladder  
thickened and heavy - a dilatation of the  
hepatic, cystic and common ducts to an  
inch in diameter - gall stones of all the  
shapes, and in all the numbers <sup>that have</sup>  
been mentioned - gangrene. ~~I have not~~  
<sup>that is but</sup> ~~with~~ one case in books of medicine. Dr  
Baillie says he never saw an instance  
of it. Perhaps a Congestion of blood was  
mistaken for it.

I have thus gentlemen from a  
large mass of empirical rubbish and from  
my own observations delivered to you an  
epitome of all the diseases & Disorders of the  
liver; but you must not expect to find  
them in the separate and distinct states in

4

wh

-a

(if

th

7u

ca

1

4 which I have described them. In no disease or diseases and disorders anastomose (if I may be allowed the expression) more than in the liver. They are blended, they succeed each other, they alternate with each other - and they mutually produce each other. Watch these changes narrowly. Forget the hepatic nosology - attend to symptoms particularly to the pulse. - attend to the absence of all its ~~essential~~ ~~marked~~ symptoms - that is to its dumb form - and prescribe for the state of the system should it vary a dozen times a day. -

I shall dismiss the subject of the diseases and disorders of the liver, by <sup>repeating</sup> ~~repeating~~ a remark of the illustrious Dr Boerhaave, and that is that the liver is ~~increased~~ <sup>out of</sup>

V ~~Suppose it to be disease~~ <sup>at</sup> ~~induced~~  
~~in a more violent nature~~ <sup>in</sup> ~~in the~~  
~~and broad complaints~~ <sup>from whence</sup> ~~attempts~~  
he secretly smiled at our abortive efforts  
to cure the diseases induced by it in the  
~~stomach, bowels other parts of the body~~  
~~particularly~~ in the head, the stomach,  
the bowels, the kidneys, the muscles &  
the skin by directing our remedies  
wholly to those parts of the body.

97.  
health or ~~the~~ Order in 99 out of an 100 of  
all chronic diseases. Of how much im-  
-portance <sup>then</sup> must be it ~~then~~ <sup>be</sup> to study its  
~~functions and derangements~~ <sup>they appear</sup> whether in disease  
or disorder. ~~This is the most~~ <sup>this is the most</sup> ~~only~~ <sup>valuable</sup>  
its diseases and disorders are <sup>not only</sup> numerous, and  
diffused <sup>throughout</sup> the whole system, but often  
because they are often <sup>devoid of obvious char-</sup>  
acteristic symptoms. <sup>this is the case that</sup> Indeed the liver may  
be considered as <sup>preeminently,</sup> the masked battery of death,  
the books ~~and~~ that are worth making  
upon <sup>the</sup> its diseases and disorders <sup>of the liver</sup> are scarcely  
and leak both of which are in our  
hospital library.
